INTRODUCTION

Web information system, is an information system that uses Internet web technologies to deliver information and services, to users.

It is a software system whose main purpose is to publish and maintain data by using hypertext-based principles.

PROBLEM STATEMENT

Since [redacted] Corp. Bhd. is using SAP through out the whole company.

Existing web system needs to be developed or updated to sync with SAP data.

SOLUTION

A web system is developed from scratch, which sync with SAP data, that enable user to issue a stock request and make changes, such as confirm successful stock transfer or cancel the stock request.

The list of requested stock is then displayed in REQUESTED table.

CONCLUSION

The web system help users in their daily task, which help display nformation quickly and the system can be access anywhere, anytime

(*depends on server availability*).
